‘WE’D LIKE TO CONTINUE TO ENCOURAGE AND SUPPORT FEMALE COMPUTING STUDENTS TO REDUCE THE SKILLS GAP AND ADDRESS THE GENDER IMBALANCE IN OUR INDUSTRY.’
—

PLACEMENTS IMPROVE OUR PROFILE ON CAMPUS

Computer Application Services Software Developer Intern

CAS is an acknowledged expert in case management and complaints management systems. Their Workpro solution is used by many Ombudsman and customer care organisations and they have many years' experience of developing systems which support organisations in delivering high quality customer service.

Shamara worked in our development team writing automated tests for our case management product Workpro and working with our software engineers to build a comprehensive test suite. Shamara has really helped the company to bring our test automation platform on.

Chris Ellis, Chief Technology Officer at CAS said, 'As an employer in the technology environment it is very difficult to find female employees with the relevant skills. We've done graduate placements before but I am keen to get students coming in on an annual basis as it improves our presence within Universities and gives us a better brand image so hopefully it is easier to recruit graduates and start to feed them into our development team. We'd like to continue to encourage and support female computing students to reduce the skills gap and address the gender imbalance in our industry.'

Shamara Thompson
University of Stirling
2nd year, BSc Hons in Software Engineering

I developed software on C-sharp for the company's complaints system and produced as many automated tests as possible using my technical programming skills.

The placement will definitely help me stand out in the future to employers with my programming skills and experience with working in a team. And I now have experience in solving real problems which I can use to push forward with my career more quickly.

I would definitely recommend a Careerwise placement to anyone who wants to have a jump start in their career.
